

Nibin Joseph

Software Engineer | Full-Stack Developer | Mobile & Backend

📞 +91 9778234876 ✉️ nibin.joseph.career@gmail.com 📍 Idukki, Kerala, India 🎂 05 Nov 2003

Professional Summary

Full-Stack Software Engineer with **8 months of professional experience** building production-grade mobile applications, backend services, and enterprise systems. Skilled across the full stack — from **Flutter & Kotlin** mobile apps to **Spring Boot, Node.js, FastAPI, and Django** backends, and **React / Next.js** frontends. Experienced in **real-time systems, REST APIs, AI/NLP integrations, distributed architecture, and blockchain-based data integrity**.

Technical Skills

Programming Languages • Java • Python • Dart • JavaScript • TypeScript • Kotlin • Go • PHP • C++

Backend & Frameworks • Spring Boot • Spring Security • Hibernate/JPA • Node.js • FastAPI • Django • Flask • REST APIs • Microservices

Mobile Development • Flutter (Provider, BLoC, Riverpod) • Kotlin (Jetpack Compose) • Android SDK • Firebase Integration

Frontend • React • Next.js • HTML5 • CSS3 / SCSS • Tailwind CSS • Framer Motion

Databases • PostgreSQL • MySQL • MongoDB • Hive (offline) • LevelDB • Schema Design • Query Optimization

AI / NLP • BERT • TF-IDF • MiniLM Embeddings • SHAP • OpenCV • GANs • VAEs • Gemini API • OpenAI API

DevOps & Tools • Docker • Git • GitHub • Redis • AWS • Firebase • Google ML Kit • Postman • Vercel

Professional Experience

Software Engineer

AIBI Campus

Nov 2025 – Jun 2026

Kochi, Kerala

- Developed and maintained **production-grade enterprise applications** across mobile (Flutter, Kotlin), backend (Node.js), and web (Next.js) platforms serving active business users.
- Built and integrated **RESTful backend services** for real-time CRM workflows — lead management, call tracking, instant social media lead alerts (Facebook, Instagram, Google), and automated follow-up pipelines.
- Contributed to **ANAD CRM** — a **4.9-star rated Flutter CRM application (100+ downloads)** on the Play Store (🔗) — integrating backend APIs, improving UI responsiveness, and fixing production bugs.
- Independently built and maintained **ANAD Dialer** from scratch using **Kotlin & Jetpack Compose** — background call monitoring, automatic CRM log sync, call recording detection, analytics dashboard, and offline queue with retry mechanism for network resilience.
- Independently built the **Next.js admin dashboard from scratch** — CRM analytics, lead pipeline views, real-time monitoring, and user management interfaces.
- Implemented an **Employee Attendance Face Verification System** using **Google ML Kit** — registered employee face data and automated real-time face verification for attendance marking.
- Managed **PostgreSQL and MySQL** operations including schema design, query optimization, and performance tuning for production workloads.
- Participated in **Git-based collaborative workflows**, production debugging, code reviews, and structured release cycles.

Projects

MovieFlix — Scalable Movie Ticket Booking Platform | *Spring Boot, Next.js, PostgreSQL, Docker*

- Engineered **Spring Boot backend** with concurrency-safe seat booking (Optimistic/Pessimistic locking, temporary seat blocking), Google OAuth, OTP authentication via Spring Security, and Razorpay payment gateway with QR-based e-ticketing.
- Integrated TMDB & Google Maps APIs; Dockerized for deployment with automated email notifications.

AURA — AI-Powered Safety, Wellness & Community Platform | *Spring Boot, Flutter, Kotlin, Next.js, Go*

- Architected a **distributed full-stack platform** with Spring Boot microservices, Flutter mobile, Kotlin companion app, Next.js admin dashboard, and a custom Go blockchain service for immutable SOS event logging.
- Built **pulse-trigger SOS system** with live GPS streaming, WebSocket (STOMP) real-time alerts, and Gemini AI for multilingual wellness feed translation.

Xpose — AI-Enabled Smart Crime Reporting System | *Spring Boot, FastAPI, Flutter, Next.js, Go, PostgreSQL*

- Developed **Spring Boot backend** for secure anonymous crime reporting, case management, and real-time police/admin notifications.
- Integrated **AI/NLP microservices** (FastAPI + BERT) for automatic spam detection and urgency classification.
- Implemented **blockchain-based evidence storage** (Go + LevelDB) and multilingual support via Gemini API with FCM push notifications.

Spice Shop — E-Commerce Platform | *Spring Boot, Next.js, MySQL*

- Built **Spring Boot backend** with product catalog, cart, and full order lifecycle including role-based authentication via Spring Security and payment gateway integration.

FitTrack — Offline Gym Progress Tracking App | *Flutter, Dart, Hive, Riverpod*

- Built a **fully offline-first Flutter app** using Clean Architecture with modular feature-based structure — workout logging, body metrics tracking, strength analytics charts, and attendance calendar. Used **Hive** for local persistence and **Riverpod** for state management.

Lyfex — Camera-Based AI Health Snapshot | *React Native (Expo), FastAPI, OpenCV, WebSocket*

- Mobile-first AI wellness assistant estimating **heart rate, breathing rate, stress, emotion, and fatigue** from the front camera in real time. FastAPI + OpenCV backend with WebSocket streaming; fully local, no external cloud required.

PlaySpot — Football Turf Booking System | *Django, Python, PostgreSQL, NLP*

- Built a sports facility booking platform with real-time availability, user reviews, and admin dashboard.
- Implemented an **NLP-driven FAQ chatbot** using **TF-IDF and MiniLM semantic embeddings** for accurate user query understanding.

Education

Master of Computer Applications (MCA) <i>Marian College Kuttikkanam (Autonomous)</i>	2024 – 2026 <i>Idukki, Kerala, India</i>
• CGPA: 8.19 / 10	
Bachelor of Computer Applications (BCA) <i>St Antony's College Peruvanthanam</i>	2021 – 2024 <i>Idukki, Kerala, India</i>

Certifications

Data Structures and Algorithms using Java — NPTEL, IIT Kharagpur	<i>Jul – Oct 2025 (12 Weeks)</i>
Covered core DSA — Arrays, Linked Lists, Trees, Graphs, Sorting, Searching — implemented in Java with OOP and distributed systems context. View Certificate ↗	
Red Hat System Administration I (RH124) — Red Hat	
Data Analysis with Python — IBM / Cognitive Class	
Data Science Tools & Methodology — IBM / Cognitive Class	
Data Science 101 — IBM / Cognitive Class	

Publications & Research

AI Techniques for Sustainable Semiconductor Manufacturing

- Research on **GANs and VAEs** to optimize water recycling systems and predict chemical toxicity in semiconductor manufacturing. Presented at Marian College Kuttikkanam, January 2025.

Achievements & Activities

Student Police Cadet (SPC): Structured leadership and civic training — discipline, teamwork, and public safety awareness.

Tech Fest Coordination: Independently coordinated and managed a Virtual Reality experience at a college technology festival.
